Dade. 1616.

A Prognostication,

In which you may behold the state of this yeare of our Lord God. 1616.

Being the Leape yeare.

Made and set foorth by *William Dade* Gentleman, practitioner in Phisicke.

Imprinted at London for the Companie of Stationers.

1616.

A Deſcription of the

foure Quarters of the yeare.

And firſt of Winter.

Sol in ♑, ♒, ♓.

The Winter quarter (in the opinion of the aſtronomers) began the xii. of December 1615. & doth continue til the xx. day of March 1616. ſo that the firſt part of Winter is in the latter end of the one yeere, and in the beginning of the other: At which time, is the leſſe dayes in the yeare, by reaſon of the Sunne greateſt declination from the Equinoctiall Southwardes.

The vſuall qualitie of this Seaſon, is knowne to be Cold & Moyſt, contrary to the nature of Sommer: For vſually in this quarter the inward partes of mens Bodyes are very hote; & being moſt in health, may digeſt plentie of

eause the chiefe and naturall heate is moued into
e inward parts of the Body, which doth greatly
omfort and strengthen those parts.

As for the Disposition of the Weather, it is set
owne hereafter more at large, for euery day
hroughout the whole Quarter.

The Sicknesses which doth vsually take part
ith this Quarter, wherewith many shall be sorely
rieued, yea vnto death, are these, and the like; as
Rhewmes, Falling-sickneſſe, Soundings, payne
n the Stomach, Lasks, Coughes, Head-ach,
ith such Sicknesses, proceeding of rotten and
orrupt Humors: with diuers other sortes of In-
rmities incident both to Men, Women, and
Children.

Of the Second part of the yeare, called, The Spring.

Sol in ♈, ♉, ♊.

The Winter Quarter being ended, and the Sunne forsaking the cold and watrie Signe Pisces, and entring into the first degree of Aries, (that Equinoctiall Signe) beginneth the Spring on the tenth day of March, the dayes and nights being equall: and doth continue till the xi. of June.

The naturall Disposition of this Quarter, Heate and Moysture, a very temperate and healthfull time, for it is accounted the fittest Season of the yeare to give ease unto Diseased bodyes, and restore Health againe to such as in whom it hath been decayed by any accidentall or naturall meane.

The condition of the weather for this Quarter is shewed in the dayly Disposition of this Season.

The Griefes which participate with this quarter, are Scabbes, Itch, small Pockes, pestilent Agues, Plurisies, Dysyllies, paine in the Head, Eyes, & Stomach, Madnesse, Melancholy, Bleeding at the Nose, Apostumes, and the Geute, with other strange and new Diseases.

The third part of the yeare, called Sommer.

Sol in ♋, Junij.

The third Astronomicall Quarter of the yeare called the Sommer, taketh his beginning when the Sunne entreth into the first degree of Cancer at which time the Sunne beginneth to decline from the Northerne Pole, towards the Equinoctiall line, the dayes beginning to decreale and wax shor-

ter

er, and the nights to lengthen. This Quarter taketh his beginning on the 21. day of June, and continueth till the 23. day of September following.

The ordinarie Qualities of this Season, (according to his proper nature,) is Heate and Drienesse; which spreadeth it selfe throughout all the parts of the Body of man.

As for the Disposition of the Weather for this Season, you may see it in the dayly Inclination.

The Sicknesses of this time are diuers, and many, threatned to people of all ages and sexes; namely, burning Agues, Pestilence, Frensies, Plurisies, hot Impostumes, Paine in the Head, with diuers Inflamations, and dangerous Infirmities, proceeding especially of Tholericke humours; which threaten to bereaue many of their mortall liues.

Of the Fourth part of the yeare, called, *Autumne.*

Sol in ♎, ♏, ♐.

AVtumne, or the Fall of the leafe, doth take his beginning at that time when the Sunne hath left the last Scruple of Virgo, and entereth into

the first degree of the second Equinoctiall Sign Libra, being on the xii. day of September: And this Quarter doth continue till the xii. day of December; which is when the Sunne shall enter into Capricorne.

The nature of this Season, is cold and dry; yet it is euermore inclined to be variable and inconstant, by meanes wherof, great store of Sicknesse are ingendered, it being the most vnholsome Quarter in the yeare.

The Disposition of this Quarter, is set down for euery day of the Moneth in their order.

The Infirmities of this Quarter are diuerse and dangerous, threatned to all sorts of people, as well the rich as the poore: as namely Crampes, Costiuenesse, Fluxes of blood, paine in the Sides, Falling-sickenesse, Shortnesse of breath, Melancholy, Timpanies, the Emrods, Apoplies, Sciatica, and Chollicks; with diuers others most grieuous. God of his mercie keepe vs from them.

A briefe Deſcription how the Seauen Planets are placed aboue the Earth in the Skie, or vnder the Earth, for euery Month after Sunne ſetting; by which you may perceiue how they keepe their motion night and day, all the yeare. Moreouer, the good dayes of Sympathy touching mans Complexion and Body, in cauſes of adminiſtration of Phyſicke, or ſuch like: And alſo, the Euill dayes (according to the maleuolent aſpectes of the Planets) in which it is dangerous to let Blood, take Vomites, Purgations, Sweates, or ſuch like attempts.

Of Ianuarie.

Saturne is paſt the South at Sunne ſetting.
Iupiter & Venus are in the Eaſt before Sunne ryſing.
Mars is vnder the Sunne beames.
Mercury riſeth a little before the Sunne.
